

**Statement by his Excellency
ABDUL AZIZ BIN HAMAD AL-AGEEL, SECRETARY GENERAL
GULF ORGANIZATIONS FOR INDUSTRIAL CONSULTING**

RECYCLING FOR GCC INDUSTRIES

Welcome to GOIC's Recycling "Recycling for GCC Industries" Project.

We started this project in January this year in an effort to build a Recycling Network at GOIC for the benefit of GCC manufacturing industries.

GOIC today is at the center of dynamic changes in the global market. We have come a long way to become a single-source provider of solutions in the field of industrial consulting services and we are happy with the changes that we have made in developing Arab Gulf Industries.

We strive to bring manufacturing industries in the GCC the latest in technology advancements and to help in alleviating any adverse effects on the environment.

Embracing change, developing new industrial management models, and adopting recycling programs are among the aspects of technical support services that GOIC has been building in order to provide to GCC industries.

I am pleased to say that GOIC has become an active agent of change in the growth strategies of many small and medium industrial companies in the GCC.

Work with us and learn how the waste and recycling industry is moving ever closer to simplified approaches for managing disposable materials. Let GOIC help you develop programs and strategies.

Let GOIC help you invest in this lucrative industry and become technologically advanced in the waste handling business.

GOIC will continue to lead Gulf industries to achieve environmentally sustainable, efficient, and cost effective waste management solutions. We will help you build the confidence and expertise that your company needs to invest in your company's growth.

Your goal as a manufacturer is to maximize value for your clients by securing the greatest returns from your recovery programs.

By mining and marketing waste and recyclables as secondary resources to global suppliers, your company could become an industry leader in conserving resources, saving landfill capacity, and benefitting everyone at each step of the recycling chain.

We are grateful to all manufacturing industries that will come forward to share with us their commitments to fostering continuous growth within the waste and recycling industry. Let us cooperate to stay at the forefront of environmental developments and technological advancements in order to provide the highest level of service, participation levels, and value added services in waste management in the GCC.

GOIC today is embarking on comprehensive environmental and conservation services programs for the benefit of GCC industries. "Recycling for Gulf Industries" is only one project among a package of services that GOIC has in planning for GCC industries.

To all Gulf manufacturers; I invite to join our roadshow in January 2014 to learn about the new solutions in conservation engineering and protection of the natural environment.

Work with us to benefit, to get the environmental education that you need, and to learn about the tools and mechanisms of sustainable production.

We shall remain with you to support you in every step of the way to help you stay competitive and to help you innovate new products for the global marketplace.

Thank you for your participation and I look forward to meeting you at GOIC.
